

Proposed Conceptual Amendment—Senate Bill 168

March 5, 2025

This amendment was submitted by Alisa Nave-Worth, Principal and Counsel, Cornerstone, and Senator Nguyen considers it a friendly amendment. Ms. Nave-Worth provided the following background information:

Senator Nguyen proposes to amend [Senate Bill 168](#), Section 2(2), by requiring a single package of an adult-use cannabis product sold as an infused pre-roll to have not more than 7 grams in net weight.

Background

Infused prerolls fall under flower packaging limits as they are made of and tested as infuse/enhanced flower. There is a clear and accurate way for them to be tested and measured. There is a significant issue with the existing regulations as prerolls are tested as "enhanced flower" which comes as a % THC but fall under the "any other product" per package limit of 800mg because of a lack of the limit for infused prerolls. Because there is conflict of UOM it is impossible for an operator to actually comply with the regulation.

We believe if we amend Section 2(2) of SB 168 with the following language, this would create greater clarity for the industry with regard to infused prerolls. This would be consistent with product sold in in the industry nationwide.

“(XX) For an adult-use cannabis product sold as an infused preroll, more than 7g in net weight.”

This would be consistent with product sold in in the industry nationwide.
