

Lake-wide limitations on single-use plastic water bottles will Keep Tahoe Blue

Single-use plastic bottles are one of the most common items found littered across Lake Tahoe's beaches, but proposals like SB 324 will help. SB 324 would limit the sale of plastic water bottles on the Nevada side of Lake Tahoe, bringing businesses on both sides of the lake together to minimize the consequences of plastic water bottle litter.

Retailers would still be allowed to sell bottled water in commonly available cardboard and metal containers.

The League to Save Lake Tahoe strongly supports SB 324.

The Numbers

2023-2024: Keep Tahoe Blue volunteers conducted 417 beach clean ups in Nevada and removed:

- more than 2,000 plastic bottles
- nearly 4,000 plastic bottle caps

Put together, plastic bottles and bottle caps accounted for more litter items than plastic food wrappers, or more than all metal cans, pull tabs, and bottle caps combined.

We can Keep Tahoe Blue by supporting SB 324, which will make it harder for plastic water bottles to end up in Tahoe's beaches, parks, and waterways.

Why Drink Tahoe Tap?

Tahoe tap water is world renowned and award-winning for its quality and taste. Bottled water costs the consumer 1,000 times more than tap water.
